

Manage your energy bills and your carbon footprint.

Sustainable Warmth is a new Government grant scheme designed to fund energy-efficiency upgrades and **YOU** could be eligible.

- Designed to support households most likely to be impacted by rising fuel bills.
- Energy-saving tech and upgrades installed by TrustMark-approved installers.
- Creating warmer, healthier homes.
- Helping to cut carbon emissions.
- Funding available for homes on and off the gas grid.

Want to find out if you're eligible for a **Sustainable Warmth** Grant? Use the details below to find out more.

Could a Sustainable Warmth Grant Transform Your Home?

Government-funded Sustainable Warmth grants are designed to support those households most impacted by rising energy bills.

Here are a few of the ways they could transform your home:

1. Improved Insulation

Installing improved insulation stops buildings from losing heat quickly. This means it takes less energy to keep your home warm, reducing your energy bills.

2. Solar Panels

Solar panels allow you to use energy from the sun to generate electricity to power your home, lowering your energy bills and helping to protect the planet.

3. Low Carbon Heating

Gas and oil-fired boilers are a key source of UK carbon emissions and older models are an inefficient way to heat your home. A heat pump system could create a warmer, more comfortable home while using less energy.

Not sure if you're eligible?
